Description

Task 1

The Monthly Budget Planner is an application that receives data (Income, expenses, and other information), performs budget calculations, and displays the result of an Income & Expense report. It determines whether the user will be left in a surplus or deficit of cash once all deductions have been made. It will also determine if the user wants to purchase a property, whether they qualify for a loan, then determines the monthly loan repayment.

Task 2

Following the general idea from Task 1, the Monthly Budget Planner now allows the option for users to purchase a vehicle. If the user decides to purchase a vehicle, they are required to enter certain information. It now alerts the user once the expenses reach or exceed 75% of their gross income. Lastly, it will display a report of the users' expenses in descending order, in which it totals all the expenses and then displays them in descending order. The Monthly Budget Planner, is more user friendly, now has multiple forms making it more appealing, and allows for easy navigation back and forth through forms.

POE

Following the same project requirements from task 2, the Monthly Budget Planner now allows for the option for users to have a savings account. This option will require the user to enter the required information for the program to determine what their monthly saving amount is, for them to reach their goal. The POE requires the project to be built in WPF or UWP. I used WPF to build the Monthly Budget Planner. The app is now properly functional as the scaling issues are resolved. The app now has real-time validation to ensure the user enters the correct information, a more logical approach to inheritance and an option to save and print the users Income & Expenditure Report. The app now shows which fields are incorrect, with many little features such as moving to the field when tab or enter is clicked.

Prerequisites

- Visual Studio 2019

Computer requirements:

- 1.8 GHz or faster processor. Quad-core or better recommended.
- 2 GB of RAM; 8 GB of RAM recommended
- Hard disk Space: Minimum of 800MB up to 210 GB of available space.

To successfully run this application, you will require Visual Studio 2019 on your device with the following Workloads attached: .NET desktop development & Universal Windows Platform development.

- It is required to run the application on 1920 x 1080 Display resolution, at 100% scaling. However, the application will not appear correctly on smaller resolution screens.
- Please note when running the application on some computers the icon error may appear. To overcome this, please comment the line by using "//". On some devices it does not recognize the icon.

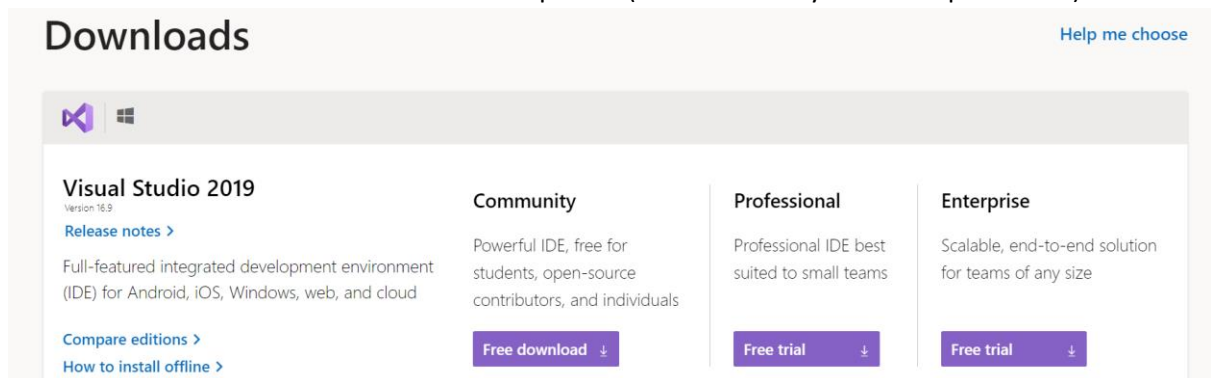

Installation

Link for the installation for Visual Studio 2019 : <https://visualstudio.microsoft.com/downloads/>

Link for the installation tutorial for Visual Studio 2019:

<https://www.youtube.com/watch?v=FB05Cso-ufE>

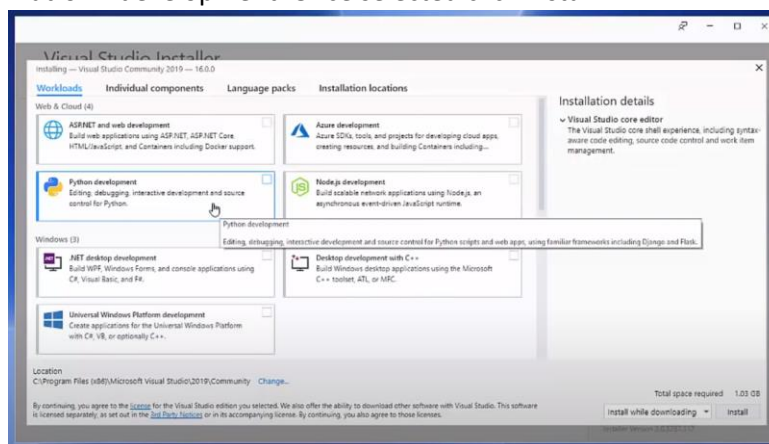

- Once you have clicked the above link, it will redirect you to the Microsoft Visual Studio 2019 downloader.
- Please select between the three download options. (The community version is preferable).

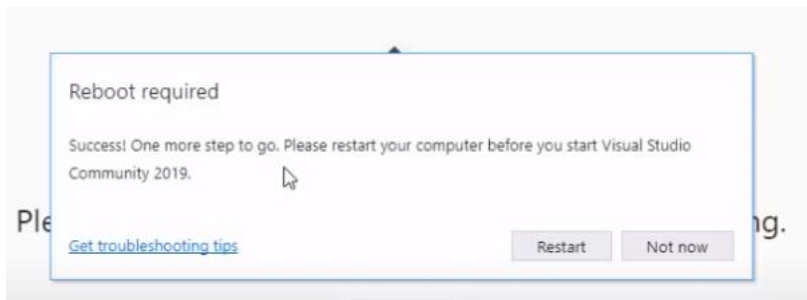

- Save the file and wait until the file has been installed.
- Run the .exe installation file.

- Wait until the process for configuration is completed.
- Please select the following workloads: .NET desktop development & Universal Windows Platform development. Once selected click install.

- Once the installation is complete, it will prompt you to restart/reboot your computer.

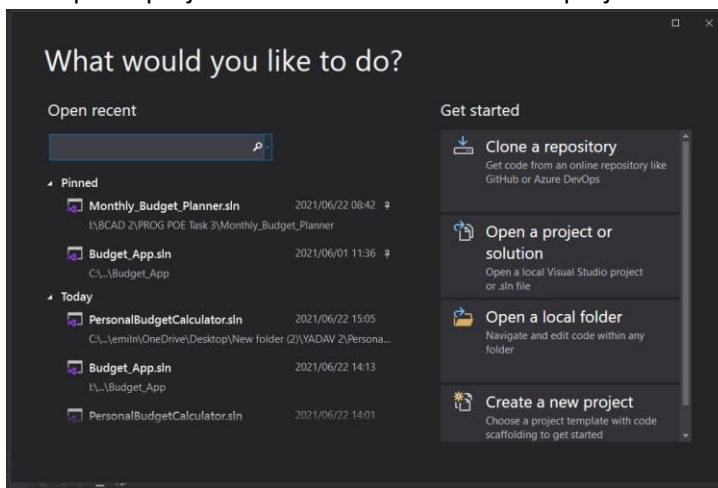

- Reboot your computer.
- Once rebooted, you can open Visual Studio 2019.

Deployment

Method 1

- Open Visual Studio 2019.
- Click “Open a project or solution” and locate the project folder

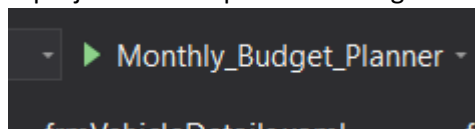

- Open the project folder. Click “Monthly_Budget_Planner.sln”

Name	Date modified	Type	Size
Abstract	2021/06/08 16:20	File folder	
bin	2021/06/08 11:57	File folder	
Child Classes	2021/06/08 16:21	File folder	
Delegate Classes	2021/06/08 16:27	File folder	
Forms	2021/06/18 18:23	File folder	
Images	2021/06/10 20:29	File folder	
Income Class	2021/06/09 11:58	File folder	
obj	2021/06/08 11:57	File folder	
Properties	2021/06/09 12:25	File folder	
Resources	2021/06/09 12:26	File folder	
Workers	2021/06/08 15:07	File folder	
Monthly_Budget_Planner	2021/06/22 14:28	C# Project file	2 KB
Monthly_Budget_Planner.sln	2021/06/08 11:56	Visual Studio ...	2 KB

- Wait until the project has successfully loaded. (In the bottom right, it will say Ready)

- The project is now open. Click the green triangle button “Monthly_Budget_Planner”

- The project will now run.

Method 2

- Open the project folder.

•

- Open the “bin” folder following the “debug” folder.

Name	Date modified	Type	Size
netcoreapp3.1	2021/03/20 10:55	File folder	

- Open the “netcoreapp3.1” folder.

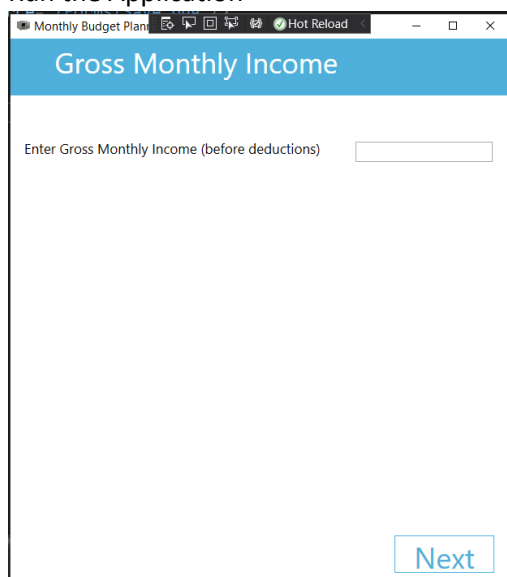

Name	Date modified	Type	Size
Monthly_Budget_Planner.deps	2021/06/22 14:29	JSON File	1 KB

How to use the application

- Run the Application

- Once the application runs, it requires you to enter your gross monthly income. Once the income is correctly entered, please click the “Next” button at the bottom right to proceed to the next form.

Monthly Budget Plan

← Monthly Expenditure

Enter estimated monthly tax deducted 14000

Enter Grocery expense 4000

Enter water & lights expenses 2000

Enter travel costs (Including petrol) 1000

Enter cellphone and telephone expenses 400

Enter any additional expenses 1500

Next

- The monthly expenditure form will now appear. It requires you to enter your monthly expenses. Once all the information is correct, proceed to click Next.

Monthly Budget Plan

← Accommodation

Choose your Accomodation

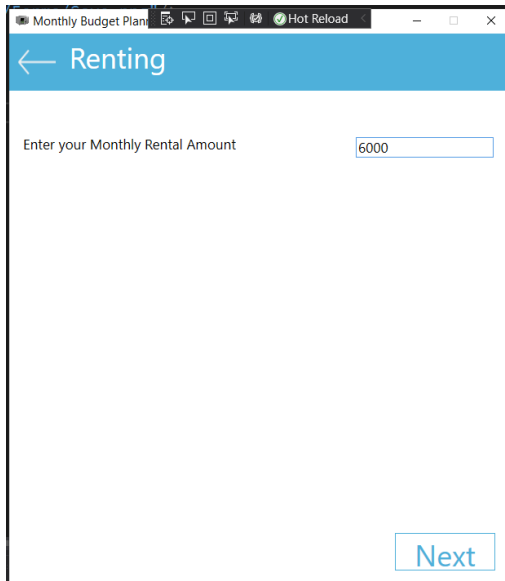

Renting → Renting

Or

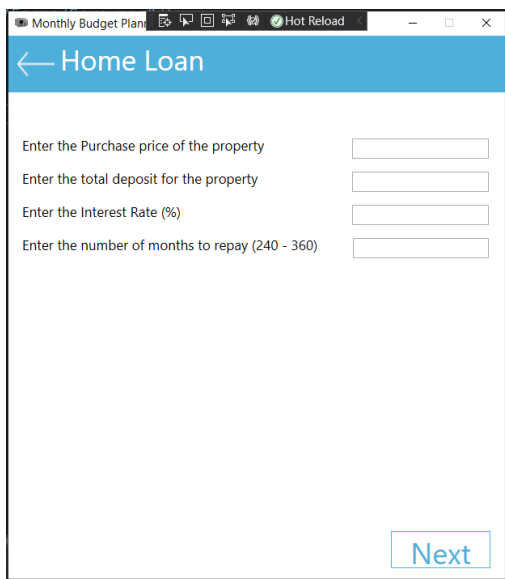

Purchase property →

- After you click next, it will show the accommodation form. This form requires you to choose between renting and purchase property.

- If the renting option is selected, the renting form will appear. It requires you to enter the rental value. Once entered correctly, proceed to click “Next”.

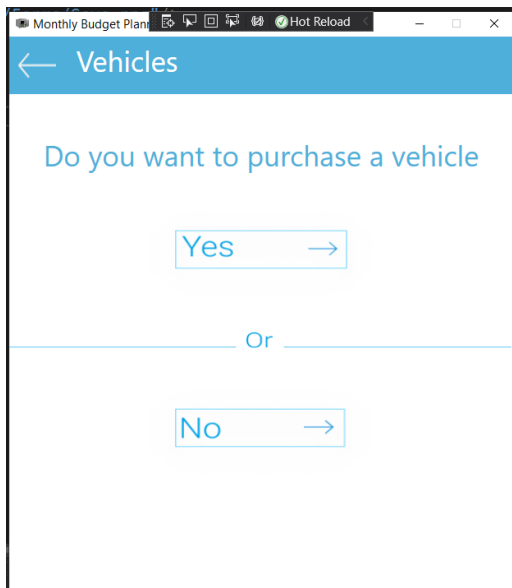

The screenshot shows a web browser window with the title 'Monthly Budget Plan'. The browser's address bar and toolbar are visible at the top. The page has a blue header with a back arrow and the word 'Renting'. Below the header, the text 'Enter your Monthly Rental Amount' is followed by a text input field containing the number '6000'. At the bottom right of the form, there is a blue button labeled 'Next'.

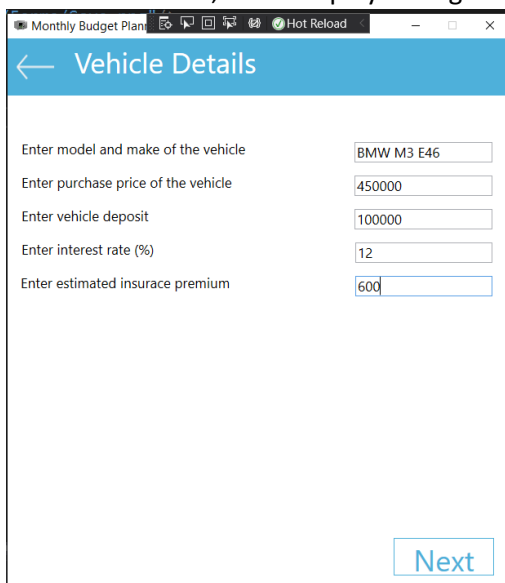

The screenshot shows a web browser window with the title 'Monthly Budget Plan'. The browser's address bar and toolbar are visible at the top. The page has a blue header with a back arrow and the words 'Home Loan'. Below the header, there are four text input fields, each preceded by a label: 'Enter the Purchase price of the property', 'Enter the total deposit for the property', 'Enter the Interest Rate (%)', and 'Enter the number of months to repay (240 - 360)'. At the bottom right of the form, there is a blue button labeled 'Next'.

- If the property option was selected, the home loan form will appear. It requires you to enter the details and values for this property. Once entered correctly, proceed to click “Next”.

- Once the “Next” button is clicked on either home loan or renting the Vehicles form will appear. This form requires you to select an option if you want to purchase a vehicle. If the user selects “No”, it will display Savings Account

- If “Yes”, was selected. It will require you to enter related values and information about the vehicle. Once all fields are entered correctly, proceed to click “Next”.

← Savings Account

Do you want to apply for a Savings Account

Yes →

Or

No →

- You are required to choose if you want a savings account. If Yes, it will display the savings account form, else, it will display the Income & Expenditure Report.

← Savings

Enter specified savings amount 6000

Enter name of the savings account BMW TURBO

Enter the Interest Rate (%) 10

Please select a year to reach your goal 2024

Next

← Savings

Enter specified savings amount 6000

Enter name of the savings account BMW TURBO

Enter the Interest Rate (%) 10

Please select a year to reach your goal 2024

 Your total expenses exceed 75 % of your monthly income.

[Submit Another Response?](#)

- Once “Next” is selected in the Savings form or “No” is selected in the “Savings Account” Form, it will display a report.
- This report showcases a summary of expenses, will prompt you if your expenses are more than 75% of your Gross income, and will alert you if your approval for a home loan is accepted. The report displays each expense of the user in descending order.
- From here, you can close the application, print the report, save the report, or click “Submit another response”, which will start the budget process again.
- Through each form it allows you to move back to the previous form.
- It will alert the user if a field is invalid with a *.

Usage

An example of the same input and the result.

A screenshot of a web browser window titled 'Monthly Budget Planner'. The browser's address bar shows 'Monthly Budget Planner' and a 'Hot Reload' button. The page has a blue header with the text 'Gross Monthly Income'. Below the header, there is a text input field with the label 'Enter Gross Monthly Income (before deductions)' and the value '50000'. At the bottom right of the form, there is a blue button labeled 'Next'.

A screenshot of a web browser window titled 'Monthly Budget Planner'. The browser's address bar shows 'Monthly Budget Planner' and a 'Hot Reload' button. The page has a blue header with a back arrow and the text 'Monthly Expenditure'. Below the header, there are six text input fields with labels and values: 'Enter estimated monthly tax deducted' (14000), 'Enter Grocery expense' (4000), 'Enter water & lights expenses' (2000), 'Enter travel costs (Including petrol)' (1000), 'Enter cellphone and telephone expenses' (500), and 'Enter any additional expenses' (1000). At the bottom right of the form, there is a blue button labeled 'Next'.

The screenshot displays the Visual Studio IDE with a Xamarin.Forms application named 'Monthly_Budget_Planner'. The main window shows the 'frmViewReport.xaml' file in the editor. A dialog box titled 'Income & Expense Report' is open, displaying financial data for a home loan application. The dialog box contains the following information:

Income & Expense Report	
Less: Vehicle repayment :	K / 520,00
Home Loan	
Purchase Price :	R 600 000,00
Total deposit :	R 140 000,00
Interest :	12%
Period :	350 Months
Less: Property Repayment:	R 5 914,29
Less: Groceries :	R 4 000,00
Less: Water and lights :	R 2 000,00
Less: Other :	R 1 000,00
Less: Cell phone :	R 500,00
Savings	
Account Name :	New Kit
Saving Amount :	R 9 000,00
Period :	3 Years
Interest :	16%
Less: Savings Account :	R 196,41
Surplus of Cash:	R 13 869,30

Below the table, a message states: 'Your request for the home loan application is approved.' followed by a link 'Submit Another Response?'.

The Visual Studio interface includes the Solution Explorer on the right, showing the project structure with files like 'frmViewReport.xaml', 'MainView.xaml.cs', 'frmVehicleDetails.xaml', 'frmGeneralExpense.xaml.cs', 'frmGeneralExpense.xaml', 'frmViewReport.xaml.cs', 'WorkerClasses.cs', 'MainView.xaml', and 'frmVehicleOption.xaml'. The bottom status bar shows 'Ready' and 'Type here to search'.

Task 2: Changes from Task 1 Feedback

Throughout the development of my PAT, it was lacking aesthetics. I decided to add multiple customized forms to my project which makes it more unique and user friendly, rather than having GUI components all over 1 form. I did not like the look of the numeric up downs, so I changed the aesthetics, in which it now looks more like a textbox. After receiving feedback, I implemented my project which now has a list that stores objects of type expense. This is used in the worker class, to generate the report and makes my project more efficient than the previous version. Furthermore, I corrected the structure of my classes and inheritance, by creating objects and then saving those objects in a List. With the previous version, I had quite a bit of repetition between the worker classes for property and rent. I summarized and combined the two classes into 1 worker class, that deals with all the child objects in the list. This is more efficient than the previous version and decreases the amount of excess code under the button by a significant amount. In the previous version, I did have validation, but I increased the validation in Task 2, with more checks. Having a multi form application, I required to allow the user to go back to previous forms. Which I now added a back button (the white arrow) at the top left of the screen. This allows the user to easily navigate back and forth between forms. Furthermore, for additional features, I changed the visual properties of the numeric up downs by removing the number and removing the arrows.

POE: Changes from Task 2 Feedback

Receiving feedback from Task 2, my application was unable to function on specific computer resolutions due to scaling issues. I redesigned my entire project through Visual Studio using WPF, using specific components from Figma. The resolution and scaling issues are now resolved on certain screen sizes. The POE requires the project to be developed in WPF using visual studio. I've recreated my GUI using XAML. The POE requires us to either add a graph or a savings account for the user, I've chosen the savings account. I added a child class called savings and 2 new windows for the saving option and the saving details. In the Task 2, there was hardly any extra features other than adjusting the numeric up downs. I now added real-time validation, a saving feature, a printing feature, changed the focus of fields when tab or enter is clicked and tooltips. By doing this, it makes the project more unique, user-friendly and allows for more uses. I slightly adjusted my inheritance and worker classes for the new savings child class. Previously, in the report I only showed the totals for each type of expense in descending order. Now, I am displaying each expense in descending order, also displaying the relative details for Home Loan, and the savings account. I have added a scroll bar for the report to allow easy access to the lower parts of the screen for the user.
